Experience

MARCH 2025 – CURRENT
FullStack Software Developer | Pawify

- I migrated the look and feel of the website using React with Vite.
- Implemented a user registration and validation system using Zod.
- I developed backend services with Django (Python).
- Connected and managed the MySQL database to retrieve and store information related to users and animals.

AUGUST 2023 – JUNE 2024
Web Developer | Rafael Núñez University

- Developed and maintained the new institutional site interface using React and Tailwind CSS.
- I collaborated with agile teams following the Scrum methodology.
- Implemented improvements to user experience, accessibility, and performance.
- I translated Figma designs into accessible and responsive components.
- I collaborated in the construction of the REST API using PHP and MySQL.

Projects

AgilCurn

- Degree project focused on SMEs, facilitating project management through the Scrum methodology.
- Features: Team collaboration and efficient task tracking.
- Technologies:
  - Frontend: React Native (Expo)
  - Backend: Nestjs, Prisma, PostgreSQL, Socket, Nodemailer
  - Deployment: Docker and Render.
